WILL BE SUCCESS

Make Coming Session a Notable One.

most successful session, both in size of attendance and interest, that has ever been held, is the opinion of J. F. Callibrath, secretary of the congress, who was in the city yesterday on the way to Goldfield to prepare for the meeting.

One of the principal reasons for this prospect is the marked activity which has been displayed, not only by citizens of Goldfield, but of the entire state of Nevadas, in forwarding schemes for making the meeting of the congress a success. Nevadans, appreciating the distinction conferred upon them by the helding in their state of a session of the representative body of mining men of the country, are exerting every effort to make it the most notable of all meetings of the kind.

Mr. Callbrach was accounted vectorday.

Total number of shares sold, 56,500; the most notable of all meetings of the kind.

Forenoon, Afternoon, Afternoon, the same line that was recently followed.

kind.

Mr. Callbreath was occupied yesterday conferring with John Dern of the congress board of directors, and Harry S. Joseph, member of the program committee, with reference to arrangements for the coming meeting. Attention was given to the topic which relates to a movement for the greater use of silver. It is the purpose to take that question entirely out of politics and to discuss it from the industrial standpoint, with reference to the interest of the producer, the manufacturer and the trade with foreign countries.

The Steptoe Valley Smelting company, about a year ago, started to drive a tunnel through the mountain near its big plant, to bring in water from Duck creek. After the tunnel had been driven about 400 feet it was for some reason abandoned. Now, J. F. Brim, who, with Provo associates, owns the Frederick group of claims, is about to start work in the abandoned tunnel, which penetrates his Frederick group of claims. Good lead-silver showings have been exposed on the surface of the group, and one of the prominent ledges, he declares, will be cut at depth by extending the tunnel fifty at depth by extending the tunnel fifty

While both east and west crosscuts on the 300-foot level of the Pieche King com-pany's property are in most favorable formation, cut occasionally by stringers of good ore, word from the mine yesterday looking particularly attractive. In that direction has been encountered a bed of ore which unquestionably comes from the ore which unquestionably comes from the Prince great fissure. The formation is said to be identical in every way with that found at like stage of development in the Prince mine, and it is believed by the superintendent that the big fissure is not more than fifty feet ahead. The drift is being pushed at the rate of five feet a day

CUTS BIG COPPER VEIN BOADSHAW RANGE

In a group of claims at the northern end of the Bradshaw range of mountains, in Beaver county, which is being developed by Warren Moody, a body of good ore has been crosscut for fifteen feet without disclosing its limits. This is at the depth of eighty feet, and Mr. Moody says that there is every indica-tion of improvement with depth. The Moody property is eight miles north of the old Cave mine, which, in addition to the iron ore it is producing, has itself been showing some good copper ore lately.

COLD CIRCLE WILLS ARE

Both custom mills in Gold Circle district are being operated steadily, according to word received from camp yesterday, and material for the new mill for the Rex mine is being hauled in from the railroad. The strike in the Ripsaw lease is holding out well in sinking, there being a large body of milling ere with a four-inch streak which is said to run \$70 a sackful.

MONTANA STARTS PLANT.

The new plant of machinery on the Montana Mining company's property, in East Tintic, was placed in commission yesterday. The plant includes a compressor, a hoist capable of sinking 1,000 feet and 100-horsepower electric motor. Until such time as all of the power shall be needed it is likely that a portion of it will be sold to neighboring mines. The double-compartment shaft is to be pushed double-compartment shaft is to be pushed down with all possible speed.

The new plant just installed by the Tin-tic Standard company is to be started Wednesday. Timbering of the shaft to the 400-foot level will be completed to-day, so that everything will be in readiness to resume sinking. Below the 400 level the sinking will be in virgin ground, giving operations more than usual inter-

Nevadans Exert Every Effort to Aimless Trading Results in Giroux People Expect to Add Largely to Steam Shovel Ground.

the same line that was recently followed by Inspiration in the Globe district in prospecting property adjacent to its original line. It purchased this outside round after developing the ore with its

It is now reported from Butte that the option which is held on Butte-Ely covers a period of sixty days, doubtless dating from close to the time the churn drills were put on the ground, the 6th of the present month. If so, Giroux at the pres property with its drills before the expiration of the sixty days. While the deal may be closed on the strength of findings previous to that time, the chances would appear to form the strength of the strengt would appear to favor the company tak-ing the full limit.

The work of the drills is now on the

ground adjacent to the new steam shovel property which the Nevada Consolidated is blocking out on the Liberty group, and which gives every promise of duplicating Copper Flat, and possibly of going it a little better in grade of ore.

"The production that is being made by the Moscow mine, in Beaver county—itself the best possible evidence that the ore bodies are opening larger and richer on the lower levels—marks that property as one of the big ones of that region" said a mining man who has had opportunity to learn what is going on there.

"From the Moscow is being shipped regularly," he continued, "eight and ten carloads a month of ore which brings from \$1,200 to \$1,600 a carload. The significant feature of this lies in the fact that when shipping was first begun, about two years ago, the ore that was sent out brought only \$400 and \$500 a carload. As to the relative quantity in sight, I know that the ore bodies are opening up larger than ever wherever work is being done in the mine." "The production that is being made by

Personal Consultations of Consultations

Not a little enthusiasm was evinced at the meeting yesterday of stockholders of the Emma Copper company, which had been called for the purpose of amending the articles of incorporation to provide for assessing the stock. The enthusiasm was over the prospect of making the company "a live one." More than two-thirds of the outstanding stock was represented, and it was said, all of the large holders strongly favored the assessment plan as a means of resuming development of the empany's promising prospect in the Alta

ized and advised to at at once levy an as-sessment of 1½ cents a share, the desire being that arrangements for starting work be perfected at the earliest possible date.

The Boston Sunshine Mining company resterday posted a dividend of 2 cent share for August. The company is con during production at about the usual rate handling 125 tons of ore a day in the mill The results which it is obtaining from its slimes plant are doubtless breaking all records, the values in the tallings running from 30 cents to 35 cents a ton.

IDAHO SMELTER TO RESUME.

Four millions of tons of developed ore and 5,600,000 tons of partially developed ore is the estimate of tonnage in the property of the Chino Copper company, presented by A. Chester Beatty, the company's consulting engineer, at a meeting of directors held in Boston. Drilling is adding rapidly to the tonnage in sight.

The directorate of the new company has not yet elected its president, but permanent directors were announced as follows: D. C. Jackling, A. Chester Beatty, C. M. MacNeill, Spencer Penrose, Charles Hayden, Sherwood Aldrich, W. Hinkle Smith, J. G. Hopkins, Henry M. Whitney, Eugene N. Doss, B. Hochschild and Sam-

30 Main Street.

Beaver County Mine Soon to Be in the Ranks of the Producers.

All that has been said of the Beaver Carbonate mine at Frisco has not exaggerated the magnitude or value of its ore showing, according to the editor of the Beaver County News, who last week made a personal examination of the property. Many tons of good shipping ore are on the dump, to which every day's work makes a creditable addition.

"About eighteen men are employed at the Carbonate, their principal employment being the driving of a raise from the to the 350 level, the raise being now wit in 150 feet of the objective point. Worl is not being prosecuted for the purpose o taking out ore to ship; instead, Superin tendent Williams is carrying on extensive development and getting the mine in shap for active production as soon as contemplated improvements are made, in ficient ore of shipping grade is blocked out in the mine to keep three shifts work leasers are making good money out of the proposition. None of the ore which is being taken from the mine is handled by this mill, and nothing will probably be done with this ore until the new mill is
